Texas Mental Health Consumers

Consumer Networking

Congressional District: TX-10

FY 99 Funding: \$60,000

Project Period: 9/30/98 - 9/29/01

Austin, TX

SM52562

This project proposes to institute a statewide network of mutually supportive, self-sufficient, empowered consumers who will be prepared and ready for meaningful participation in mental health service planning and delivery at the local level. There are strong local chapters of the Texas Mental Health Consumers whose members demonstrate well-developed leadership skills in chapter activities. The purpose will be to strengthen collaboration among all organizations that are committed to empowering consumers and supporting consumer efforts to participate in decision-making roles relative to service planning and delivery. In order to meet that purpose, the consumer network will provide a Leadership Training Academy and will secure technical assistance to support the successful implementation of the leadership and business management endeavors. Texas Mental Health Consumers, in collaboration with the Parent Connection, the Texas Alliance for the Mentally Ill and other consumer supporter groups, will operate the Leadership Academy. It will become a systematic way of training consumers and consumer supporters for their roles in mental health policy and planning at both the local and State levels.

Austin, TX

SM52589

The Texas Alliance for the Mentally Ill proposes to design and establish a multi level leadership training program incorporating introductory, intermediate and advanced training components. The program will utilize training modalities of various duration and a "train the trainers" function, to create a long-term leadership academy structure. By incorporating a trainers function, the project will develop a process through which leadership training activities may be provided on an ongoing basis at both the State and local level. The program will create requisite leadership skills which increase the capacity of consumer and consumer supporter networks to participate in policy development, program activities and quality assurance services. A State-level advisory team comprised of representatives from primary stakeholder groups will be included in the curriculum development team, ensuring applicability to local needs. This project will build on the accomplishments of previous consumer and family projects which have resulted in short term concentrated leadership academy programs. A development team will review and evaluate leadership academies in Idaho, West Virginia, and Alaska in order to incorporate and adapt these models in Texas.

State Performance Indicator Pilot

SM52614

Congressional District: TX-10

FY 99 Funding: \$99,764

Project Period: 9/30/98 - 9/29/01

While Texas is able to report all of the measures selected in the Five State Feasibility Assessment Study, more work is needed at the State level to operationalize measures so that they are not only standardized and more meaningful, but also more useful to consumers, family members, advocates, and providers; State and local planning councils; State and local management; and clinicians. The project will focus on assessing and refining the Five State Feasibility indicators with the following activities: (1) analysis of indicators including testing operational measures for indicators, incorporating risk adjustment factors, defining change scores that are clinically meaningful, and assessing the relationship of outcomes to process and cost measures; (2) testing various instruments for appropriateness including the consumer survey; (3) developing of meaningful reports understandable to all stakeholders, and (3) developing of training materials and training formats for clinicians, consumers, and family members related to the significance and interpretation of performance measures.

Employment Intervention for People with SMI

SM51836

Congressional District: TX-10

FY 99 Funding: \$329,703

Project Period: 9/1/95 - 8/31/00

This project, known as Texas Earns, compares the effects of the traditional supported employment services approach to services enhanced by intensive training in building and strengthening natural support networks. Specifically studied are the effects of building interpersonal skills which are thought to contribute to job performance and subsequent job tenure. The study builds on the empirical findings that support the current employment philosophy which supports the "place-train" model of vocational rehabilitation for adults over the traditional "train-place" model. Approximately 240 consumers will be randomly assigned to one of the two interventions. The location of the project in an ethnically diverse community in San Antonio where half the population is of Hispanic origin will allow measurement of the effect of ethnicity on both support networks and employment outcomes.

The Parent Connection

Conroe, TX

Children and Family Network

SM52527

Congressional District: TX-08

FY 99 Funding: \$60,000

Project Period: 9/30/98 - 8/31/01

This project will enhance services to children with behavior disabilities and their families by providing training and leadership, individual advocacy, information and referral, and strategies for systems navigation in Texas. To meet the project goals and needs of families, three Statewide organizations will combine their training efforts -- the Parent Connection, local chapters of the Federation of Families for Children's Mental Health, the PRH/PATH project (State parent training and information grantee), and Texas mental health consumers. A team will design a training curriculum that will be taught in a "train the trainers" model. Technical assistance will be provided to organizations, families, providers, and all others by the Parent Connection with the support of an existing toll-free telephone line, e-mail, phone, person-to-person contact, fax, or other modes of communication.

The South Texas AIDS Training (STAT) project, a unit of the Department of Psychiatry at the University of Texas at San Antonio Health Science Center, provides training in the psychological and neuropsychiatric aspects of HIV/AIDS to 3,000 traditional and non-traditional mental health providers in the South Texas border region and other underserved areas of Texas. The training, based on three core curricula (general education, neuropsychiatry, and ethics) and state-of-the-art information, includes continuing medical education, workshops for providers and agencies, workshops at regional professional association meetings, audio conferences, and the integration of training modules into university-based graduate courses. Late-breaking information is disseminated to trainees via the STAT web site, the Migrant Clinician's Network home page, and a quarterly newsletter. Training activities are conducted by an expert group of mental health/HIV trainers who reflect the diversity of the targeted training audience. Providers in Texas-Mexico border areas are being trained by bilingual and bicultural trainers who use handouts and resource materials written in both English and Spanish.

Rio Grande Valley Council on Alcohol and Drug Abuse

Edinburg , TX

Family Strengthening

SP08806

Congressional District: TX-15

FY 99 Funding: \$96,123

Project Period: 9/30/99 - 9/29/01

This program targets low income, Mexican American families at risk for alcohol and drug abuse because of poverty, family dysfunction, exposure to gangs and violence, isolation, and a lack of education and skills. The goals and objectives are: to strengthen families through resiliency skill building; improving access to intervention and treatment for substance abuse; and increase community capacity to assist families involved in/at risk for substance abuse. This will be accomplished by: selecting an intervention through a community-driven process to select a culturally appropriate intervention; add to the knowledge-base regarding cultural and other adaptations of the family program through documentation; identify and document key components of the decision-making process regarding adoption/adaptation of the intervention; and reduce substance abuse and increase resiliency skills.

Targeted Capacity Expansion for Substance Abuse Treatment
and HIV/AIDS

TI12160

Congressional District: TX-18

FY 99 Funding: \$468,867

Project Period: 9/30/99 - 9/29/02

The applicant is requesting funding to provide out patient substance abuse treatment services to 300 African American women and their children per year for three years. The goal of the program is to reduce the use of alcohol and other drugs and spread of substance related HIV among African American women by using the transtheoretical stages of change model, motivational interviewing, and behavioral and relapse prevention training. The treatment will consist of 4 hours of individual and family therapy, 20 hours of group counseling, 5 hours of HIV risk reduction education, weekly counselor facilitated support groups for 4 months.

Targeted Capacity Expansion for Substance Abuse Treatment
and HIV/AIDS

TI12196

Congressional District: TX-18

FY 99 Funding: \$519,084

Project Period: 9/30/99 - 9/29/02

The Initiative for Positive Change (IPC) represents a collaboration among three community-based substance abuse treatment providers and HIV/AIDS related services, and an evaluation service provider. The goal of IPC is to create a comprehensive system of care directed toward African-Americans who are in the criminal justice system, including probation and parole, and the families of these individuals, especially the children.
